Werum's Plug & Produce Solution awarded as one of the best solutions at the Industriepreis 2018

PAS-X MSI Plug & Produce Solution awarded as Best Of at the Industriepreis / This solution allows easy integration of equipment via message-based interface / New version MSI 1.1 with enhanced usability now available

Lüneburg, Germany, 12 September 2018 – The software solution “PAS-X MSI Plug & Produce Solution” from Werum IT Solutions was awarded as “Best Of” at the Industriepreis 2018 in the category “IT & Software Solutions for Industry”. With this award, the jury of experts honors the novelty, product maturity and future-oriented approach of the solution, as well as its economic and technological benefits.

Werum's PAS-X MSI Plug & Produce Solution allows the easy and fast integration of machines, equipment and automation systems into the existing production environment of a pharmaceutical or biotechnological manufacturer. The machines on the shop floor and Werum's PAS-X Manufacturing Execution System can communicate directly with each other via a new, standardized and message-based interface. This allows to reduce the integration effort for a new machine by up to 75 percent.

“We are very pleased about this award, which is both a recognition and an incentive for us,” says Christiane Dickel, responsible Product Manager at Werum IT Solutions GmbH. “Our PAS-X MSI Plug & Produce Solution is a trendsetter in networked production and an important prerequisite for advancing Industrie 4.0 solutions in the pharma and biotech industries. Together with customers and industry associations such as ISPE, we are continuously developing our solution and have just released a new version with improved usability and extended options.”

With the Industriepreis, Initiative Mittelstand and Huber Verlag für Neue Medien, publishers of IT magazines, honor particularly advanced industrial products and solutions in 14 different categories every year. An independent jury of experts consisting of professors, scientists, industry experts and journalists evaluates all submissions.
