

PACKAGING TECHNOLOGIST (M/F)

REQUIREMENTS

SHORT DESCRIPTION

Packaging technologists develop and produce packaging. Using CAD (computer-aided design), they create the ideal packaging for the product, either to specification or based on their own ideas. In the job preparation phase, they prepare the documentation and in some cases the cutting and stamping dies for production. Various machines such as cutting machines, automated punching machines, gluing machines, etc. are set up by packaging technologists and monitored during production.

APPRENTICESHIP

Packaging technologists have good spatial awareness and are able to oversee fairly large workflows. They have good manual skills and technical knowledge and can work accurately and neatly. They are team players, have a good grasp of ideas and are responsible and reliable.

DURATION OF TRAINING

The training for packaging technologists takes four years to complete.
